One Page Project Summary Document

Project Title:

Service Finder - Local Service Provider Platform

Domain:

Web Development

Role:

Full Stack Developer

- Built full-stack app using MERN

- Created secure login and service booking system

- Managed database and admin controls

Overview:

Service Finder helps users find and book local services like electricians or plumbers. Providers can list their services, and users can book them easily based on location.

Key Features:

- Login/Signup for Users & Providers

- Search and Filter Services

- Service Booking System

- Admin Dashboard

- Mobile Responsive Design

Tech Stack:

- Frontend: React.js, Bootstrap

- Backend: Node.js, Express.js

- Database: MongoDB

- Auth: JWT

- Tools: GitHub, Postman, VS Code

Outcome Relevance:

- Built real-world full-stack app

- Learned API security and role-based access

- Improved problem-solving and UI skills
